William (Bill) Kemp, is V.P. Engineering for an energy sector corporation, where he leads the development of hydroelectric power systems. Bill is a leading expert in small and mid-scale renewable energy technologies. He is the author of the best selling books The Renewable Energy Handbook and Biodiesel: Basics and Beyond. Mr. Kemp is a co-author of the David Suzuki

Foundation report Smart Generation; Powering Ontario with Renewable Energy. In addition he is the chairman of electrical safety standards committees with the Canadian Standards Association. He and his wife Lorraine, live a low-carbon lifestyle, off the electrical grid, producing the power for their hobby/horse farm, from renewable resources.

Pretty good overview of a variety of renewable energy systems. Certainly enough to get you started and then you can delve in more deeply on specific systems you are interested through other resources (but it will give a good foundation so you really understand what will and won't work for you). The only negative is that I could do without the author's very obvious political slant... had I wanted to read about that over and over (throughout the book), I would have chosen some other material.

Thank you for all your work in Solar Photovoltaic Energy !
