So far I have Examrackers, Princeton, and Kaplan (2015+ versions). After comparing the three, Princeton has the thickest books and there may be a lot of extra content outside the scope of the new MCAT. Seems to be following the AAMC guidelines. On the other hand, not all of the books are 2nd edition inside the package; for example, some are first, second, and even third editions. This is concerning because the package is labeled as "2nd edition", which may indicate Princeton slapped a label on their old books and updated a few. It may be for the best, however, I think it would be professional if all of the books were in uniform edition. Additionally, I purchased this package anticipating many practice questions, especially passage based passages. To my disappointment, there is only 1 passage at the end of each chapter for practice with around 5-9 chapters per book. This is really not enough for practice. As a good alternative, Examrackers has 30 minute exams at the end of each chapter in their books. The EK exams consist of 3-4 practice passages per exam. The good news for Princeton is that they offer 3 full length practice tests for this package, which are brand new. However, because there are not enough passages, excessive content, and differing editions per book, I have to give it three stars. Kaplan seems to have a more concise review than Princeton. Examrackers has more passages than Princeton. Overall, this Princeton package is good for its 3 practice tests. If I were to buy it all over again; First, I would purchase the Princeton Biology book because it will most likely cover everything. Second, I would buy the Kaplan Biochemistry and Psychology/Sociology book (these subjects yield 53% of the MCAT). Third, I would utilize Examrackers Physics, Organic Chemistry, and General Chemistry because they are straight to the point and this is only 25% of the new MCAT, plus there are a good amount of practice passages at the end. Lastly, CARS section, 22% of the MCAT, requires pure reading and practice; while yes there are "strategies" to tackle passages, most of them are common sense and you would

be better to invest the money in a lot of practice passages. I hope this helps.

In addition to what I learned from my class textbooks, they were the only books I used for preparing MCAT tests. As it was advertised: . "Everything You Need to Know to Help Achieve a High Score."

Great books, great content, great online resources, great presentation. Highly recommended to those taking the MCAT. If I remember, I'll post an update with thoughts after taking the real MCAT along with my score

My first time taking the MCAT. I decided not to take the class because, well, I don't want to pay 2k just to have discipline in studying. Also, I learn better on my own. I'm halfway through the books and I would say they are very sufficient for self-studying. Practice drills/questions at end of each chapter gets me. The only thing I don't like about these books:(1) Psychology--the context is not made as engaging as the other books. I love psychology but the book is so context packed, it lacks visual explanation and further elaboration (unlike the Khan Academy Lectures), which would be more effective.(2) Physics--too much elaboration! More visual examples than verbose analogies would be preferred.(3) CARS--Hate it and love it! I don't like how they spent every chapter focusing on finding your weakness instead of strengthening your weakness--that makes it more frustrating. I tried it their way first until chapter 3. That chapter, I didn't read any of their techniques, skipped to the practice drills, timed myself and... Out of the 2 passages, I got 1 wrong. I finished the CARS book after that without reading the techniques/tips, and would only get 1-2 questions wrong per drill. Annotate is important but practice is the best.Overall, great practice tests, science contents and passage drills.Am I more confident now after going through their books? Definitely!

Great amount of material for the ~\$120 price

Nice set, well worth price.

Best mcat prep hands down.

Has a lot of info(even more than the actual MCAT requires) but so far it's good. FYI the "3 tests" are actually 2 tests and 1 demo/practice test.
