Grade Level: 4 - 7

Customer Reviews

Stan Collins, involved from the early days of Garlic Press, is the author of numerous educational materials on English, math, sign language, and substitute teaching. He has been involved with creation, editing, production, and marketing of publications for greater than twenty years.

This book doesn't provide enough good examples for my 6th grade to learn from. It seems more supplemental to something else than a stand-alone lesson and practice book.

marvelous series

Got this book to help brush up on math skills followed with the Pre-Algebra 2 work book. Easy to understand and directions are easy to follow.

easy to follow...i love it

A little too simple for the grade it intended.

I was not happy because when I purchased the item the condition was listed as new/never used. Upon receiving the item I opened it up to find that it had answers written on the pages. I homeschool and thought this workbook would be a good extra tool for my son. But now I have to go through every day and erase the answers, but he can still see most of them. This is the first time I have ever been unhappy with an purchase.

I am using this as a homeschool pre-algebra book. The whole series (pre-algebra books 1 and 2 and pre-geometry books 1 and 2). The lessons are short and clear with multiple methods presented. There are tons of practice problems. For word problems supplement with something else because all of these problems are just numbers.
