Customer Reviews

Grade 7-9-- Kahl gives an overview of how, where, when, and why tornadoes and hurricanes occur. He discusses how meteorologists predict these storms, and relates some historical examples and their resulting devastation. His writing style is somewhat turgid, but he uses clear, uncomplicated terms to describe and explain complex phenomena. Sharp, full-color photographs appropriately illustrate the text. The book covers much of the same information and is as attractive as Christopher Lampton's *Tornado* (Millbrook, 1991) and Ann Ambruster and Elizabeth Taylor's *Tornadoes* (Watts, 1989). *It's Raining Cats and Dogs* (Houghton, 1987) by Franklyn Branley is not as detailed. --Meryl Silverstein, American Museum of Natural History, New York City
