Freaking long and huge textbook. It was mandatory. Had a lot of useless and repetitive stuff, but if you were able to get past all the pretentious big words you could get what the author was trying to say. I wish I could remember all of it though. But >2000 pages, I think I barely retained 10 pages from the whole book. I liked this one a bit more than my other nursing school books because it had quite a few pictures and diagrams unlike other textbooks that just have gigantic blocks of words with no breaks in between.

The book has so many errors. Same edition, same print of 2 different books have different information. Things are not described in an understandable way. The book is constantly repeating

itself. Only purchased because it was a requirement for my course.

I bought this for my nursing class because it was listed as a required book. A few friends of mine also bought this and tried to activate the code for prep u. However this book DOES NOT give you prep u access like other texts do. It gives you access to "student resources" but nothing else. The ISBN is the same number as the CoursePoint+ but it does not come with the same features that the CoursePoint+ does, like practice questions or virtual simulations.

Worst textbook on the face of the planet.

Great packaging and it was exactly what I ordered and had the access code for online access which is what I love since I am not a book reader =]

A lot of the things in this book are VERY old timey.. As in, they have come up with so many evidence based practice items that makes half this book obsolete. It is not a bad book since I needed it for nursing as a required book, but my teacher tends to use EBP more than this book. Its very heavy, and I believe we could of lived without buying this...

Not a bad book, except for the fact that the answers to the end-of-chapter questions are nowhere to be found. Seems like only instructors have access to them- annoying!

Let the pictures of what I was sent speak for themselves.
